Waiting for this second close. Bcz first close was right on the box and I wanted to wait for h4 to close above mpoc also.

Watching out oppty to add... wait mpoc show more strength  
Best if tested and hold

Quite painful as this risk was not very small. Is there really no chance to tighten my risk?  
 The best window probably is when new box formed and no more plywood support and with h1  
 mpoc as headwinds. But there is any change of trend so I was still bullish and that's why I didn't  
 tighten my risk. By it become bearish there is already not much room to reduce pontential damage.
