

Let me show you how can use the EminiForecast tool once a week and make several thousands per week. And you place 1 maybe 2 trades per week. Sorry – nothing else to buy either – just subscribe to the eminiforecast service and you are good to go:

PLEASE NOTE I AM NOT MAKING TRADING RECOMMENDATIONS.. I AM SHOWING YOU HOW I USE THE SYSTEM TO TAKE CASH OUT OF THE MARKET EVERY WEEK. YOU CAN LOSE YOUR SHIRT TRADING.. IF YOU DO NOT HAVE A BASIC UNDERSTANDING OF OPTIONS – YOU SHOULD NOT TRADE THIS METHOD UNTIL YOU DO.

DISCLAIMER #2: I am a huge fan of the guys at eminiforecaster – but I do not know their names and could not pick them out of a line up. I do not work for them in anyway. I am not sure if they know about this report – but they have not endorsed it in any way shape or form.

OK – legal disclaimer out of the way lets get going. I am going to be showing you 3 charts from the eminiforecast site... Please note that I am using these 3 charts as a sample. Once you get the hang of this – just go to <http://snipurl.com/eminf>

pick any chart over the last year and you tell me how many losing trades you would have had. That is the beauty of this – you can back test it 100%... Unless you see the magic – do not attempt. But I think over the next few charts you just might say “holy sh%^!!!”

EminiForcaster Layout:

What you see below is a COMPLETED week. This is what the charts look like at the end of the week. But on Sunday when a new forecast is posted all you see is the yellow line and the numbers on the right hand side. It paints in the software every 5 minutes as the week progresses. Please note that during the week the Yellow line does not move!!

Some people use this to calculate specific turn times of the market. As you can see it is not bad at that – but I think most users actually miss the REAL Power of this tool.

Look at the charts and ONLY focus on the highs and lows for the week. That is all. Just to make sure we are on the same page, look at the chart below. What does the YELLOW line say our High and Low for the week will be? (answer below chart)

The answer: Low for the week will occur approx 1372. The High will occur at approx 1395. Please note I was WHAT was the high and low, not WHEN. This is key. Just in case you did not get the answer correct I have marked below WHAT the YELLOW line said the high and low for the week would be.

In studying these charts, I noticed that the only thing that was not accurate on these charts was the opening on Monday morning. Fair enough since we live in a global economy and stuff can happen overnight to dramatically change the markets on Monday morning. So I made a slight change to my trading that changed everything..

Here is how I now trade these charts... Charts are posted on Sunday evenings. You will get an email telling you they are now posted. I will usually go to the site and take a few minutes glance at the chart.. But on Monday is where I do my 5 minutes of “work” and make my money...

On hour before market closes on Monday and I simply see where we are trading and the difference between where we are and where we are going. I then place a trade using the Weekly OEX's to clean up. Let me walk you through this with the chart below and then we will do some more to make sure you got it.

Point 1 below shows you where the market was about 1 hour before the close on Monday – 4/21/08. At approx 1392.. The Yellow forecast line for the week tells us the low for the week is going to be 1372 (see above in our previous exercise) and the high will be approx 1395.

So at our Monday point 1 we are at 1392. So are we further away from the 1395 high or the 1372 low?? Easy – we are 3 points away from the forecasted high and 20 away from the forecasted low. Time to sell puts on the weekly OEX.. And we should get them pretty cheap because the rest of the Market is riding that uptrend. I would place the trade Monday afternoon.

Look what happens on Tuesday??? WE GOT PAID.. Yep, market collapsed and dropped down to the low forecast point (point 2). I am cashing out my chips.. But wait... We are not at the low of the forecast. And we are now 24 points away from the forecasted high for the week. Time for me to buy some really cheap weekly calls – everyone is bailing out of the market and no one thinks it is going up except you and I!!

And look what happens about noon on Thursday?? WE GOT PAID AGAIN!! We shot right up to the high forecast point of the week (point 3). Cash out our chips and let's head

to the pool until Monday again.

Some of you may ask – “how does this software do this?” My answer is – I could care less.. You just as well ask why the sun comes up every morning because this is just as reliable!!

Now you got the basics, lets walk through some other charts.

This one can be confusing if you “think too much” about it.. It is actually very simple but some have had difficulty grasping..

1. 1 hour before market closed on Monday 4/7/08 we were at 1380. Some people would say “see – software don’t work – it said the market would open at 1332 and it opened @ 1388”.. WRONG... Remember – we care about 3 points on the chart: High; Low and pre-close price on Monday. The forecasted high for this week was about 1388 (see Point 2 on Thursday around noon). Well we opened at the high or “took out” that high Monday around noon. So what is my trade here? Well it says the low for the week will be 1332 – 50 POINTS SOUTH!!!. I load up on OEX weekly puts..
2. And what happened??/ Brother – we got paid!!! Market dropped like a rock!! You would have woke up Friday a lot richer than you did on Monday had you played this right!!
3. Bonus tip for you more aggressive traders. Go to your online broker and set up an alert for the high / low of the week. On this week you would have gotten a notification that we took out the high on Monday around noon. We would have known we had taken out the high and puts would have been real cheap!

Ok – last one and then time for you to test yourself. On the below chart from the week of 3/31/08.

1. Hour before close on Monday we are around 1320.. Within spitting distance from the low for the week.
2. The high for the week is marked at the open (2) at 1380. We are going long..
3. We got paid around 11:00 on Wednesday 4/2/08.

This also brings up a very good point. In the last chart our high / low happened Monday to Friday.. It does not always happen like that. On this chart I would have taken my profits for the week and took the rest of the week off. **MOST IMPORTANT RULE** of this system. When the high and or low has been taken out for the week – **YOU ARE DONE!!** I do not want to ever chase an intraday. Do they work? Sometimes – but I feel really good batting around 100%.

OK – Test time.... Get out your pens. See the chart below. Circle the 1 hour before close price on Monday... Circle forecasted low and high for the week. Now write down your trade you would have made on Monday. Then go to the next page for the answers:

Forecasted Low for the week: 1312
Forecasted High for the week: 1360
Monday afternoon price: 1356 (we took out the forecasted high for the week)
Trade: Buy Puts and you got PAID ON FRIDAY!!

I know many of you are saying too easy.. Can't be this easy?? I only picked charts where it would work... etc.. etc.. My answer is – numbers do not lie!! And you can not change history.. Did you notice the charts from above were from 4 sequential weeks in row?

Here is what you should do now. Go to:

<http://snipurl.com/eminf>

Skip the part where it says to put in your email address and just click History at the bottom of the page. This will take you to the last 52 weeks (yes – that would be 1 year) of forecast and results using the eminiforecast tool. Go back as far as you like and you tell me where it failed? Then if you like what you see, sign up for the 2 week trial and watch it live.

Final notes. In my example I used weekly OEX.. That is just my preference. You can use what ever financial instrument you are comfortable with that will pay you based on the market movement. For example – a safer way to play upswings could be the QQQQ. When you need to play the short side, buy QID.. The QID is an index that mirror the reverse of the QQQQ. So when the market goes down – the QID goes up and QQQQ goes down. When the market goes up – the QQQQ goes up and the QID goes down. While weekly OEX options expire worthless every Friday – the QQQQ and QID do not.

Good trading.. And to answer the remaining doubting Thomas's and why I just gave you a trading program I could have charged a truck load of money for? I am a big believer in paying it forward and giving more than you take. Please take some of the money you make off this and donate to others who could use it.
