

## NinjaTrader Version 7.0.0.4 Beta Release 4 - November 4th, 2009

Status	Issue #	Category	Comments
Added	3034	Market Analyzer	Available data in the Market Analyzer is now displayed in a multi-level grid
Added	3041	Charts	Changed Kagi bars to use an updatable incomplete bar with realtime data
Added	3056	Indicators	Added property InHitTest to indicators to give the user flexibility to leave out drawing objects from the indicator's selection process.
Improved	2996	Barchart.com adapter	Updated to latest API and re-enabled pre/after market data.
Improved	3031	Historical Data Manager	HDM import now has an additional combobox to set the timezone of the imported data.
Improved	3032	NinjaScript indicators	Added back the feature to access hosted indicators in Initialize().
Improved	3042	NinjaScript	Throw exception is the respective methods for HeikenAshi, LineBreak, Renko, Kagi, PointAndFigure are not used but the generic Add() method.
Fixed	2904	Account Performance	Account performance->Execution tab->Right click on execution->Chart did not work as expected.
Fixed	2988	MBT adapter	Several issues related to historical data on MBT.
Fixed	2994	Import stock list	File->Utilities->Import stock list->Session combobox did not properly show session names
Fixed	2995	NinjaScript	Issue with BarsDisplayText
Fixed	2997	Workspaces	Restoring a workspace with cross hair on a chart could crash NT.
Fixed	2998	Charts	Added additional description text in the right/left horizontal grid line properties in chart panel properties.
Fixed	2999	Charts	Drag & drop or deletion of bar series or indicators could cause scaling/scale justification errors.
Fixed	3000	Charts	'Set default' button was displayed on chart panel properties window
Fixed	3001	Charts	Indicators scaled to objects drawn from this indicator even when on separate panel.
Fixed	3002	Charts	Panels did scale to Dots and Text even when they were not visible on chart.
Fixed	3003	Indicators	Indicator VolumeZones, DrawLine parameter did not work as expected
Fixed	3004	NinjaScript	Using TickSize in Initialize() now throws an improved log message.
Fixed	3005	Data box	Data box shows info from two bars while on the same bar for box style
Fixed	3006	Charts	Multi series indicator on multi series chart could crash.
Fixed	3007	Hot Key Manager	Set a wider min width to avoid formatting trouble on tool tips.
Fixed	3008	Connecting	AutoConnect did not properly Initialize all UIs
Fixed	3009	General	NT could crash on reloading/restoring from xml when executions were on chart.
Fixed	3010	Chart Trader	Entry parameter instrument in chart trader -> ATM strategy could have been blank on multi series.
Fixed	3011	Indicators	ZigZag.HighBar did not work as expected, since an Update() was missing.
Fixed	3012	Charts	X axis labels on equidistant tick charts updated on every second when ticks came in on realtime.
Fixed	3013	Charts	Panel height wasn't maintained in some situations.
Fixed	3014	Drawing objects	Fibonacci objects not working when chart put into logarithmic scaling.
Fixed	3015	SuperDOM	Several SuperDOM Issues

Fixed	3016	Drawing objects	Select the fib tool and try to draw a retracement, the pen cursor and the bottom of the retracement value are off quite a bit.
Fixed	3017	Historical Data Manager	HDM edit tab was only deleting cache data when deleting the root node not all associated data.
Fixed	3019	Charts	Multiple session definitions on actual data could result in missing data on chart.
Fixed	3020	Charts	X axis could show too few labels on split sessions (multi sessions per day)
Fixed	3021	SuperDOM	On placing an order in the SuperDOM the instrument combo box would have focus
Fixed	3022	Charts	Sync up chart trade PnL and PnL on position on chart.
Fixed	3023	Automated Strategy	Multi connection strategy could cause exception
Fixed	3024	Strategy Analyzer	Compiling a strategy did not update the strategy properties
Fixed	3025	Strategy Analyzer	Combined results: ProfitFactor no longer is a weighted average but GrossProfit/-GrossLoss
Fixed	3026	Strategy Analyzer	Improvements on SA, MonteCarlo simulation
Fixed	3027	Strategy Analyzer	Backtesting a basket of instruments could not be aborted.
Fixed	3028	Chart Trader	Selected strategy was not restore on reconnected.
Fixed	3029	General	Quantity control could cause an exception.
Fixed	3030	Indicators	Overhauled .Line style plotting to avoid funny rendering on chart compression
Fixed	3033	.NET	If .net draws dash-dot-dot-..., the line would look like a dash when chart is scrunched.
Fixed	3035	Charts	Handling bar series with very large days back value on multi series chart could crash NT.
Fixed	3036	Charts	Detection if same series already on chart on typing in period value only didn't work properly on futures.
Fixed	3037	Charts	Toolbar button displayed selected chart style wrong on hi lo bar chart style and on ohlc chart style.
Fixed	3038	Indicators	Reduced the y margin on top and bottom of indicators.
Fixed	3039	Indicators	Labeling for Heiken-Ashi incorrect for periods greater than 1.
Fixed	3040	Charts	Point and Figure not updating properly when Box Size = 1. If you use 1x3, you still get a two by two movement.
Fixed	3043	Charts	Objects drawn by indicator or strategies could be off on multi series when not based on first bar series.
Fixed	3044	Charts	Chart data on preday could have been missing on a session definition spanning over midnight and having empty days (e.g. 24/5).
Fixed	3045	Market Replay	Allow setting value before min date/after max date in replay connection -> goto dialog and popup error message if before min/after max time.
Fixed	3046	Account Performance	Trade pairing could be off in using the same entry execution multiple times.
Fixed	3047	Indicators	ZigZag indicator didn't show up as selected when it was selected.
Fixed	3048	Charts	LineOnClose chart style on empty chart yielded 'Parameter is not valid' message in trace.
Fixed	3049	Drawing objects	Copy and paste of a triangle not the same size and shape.
Fixed	3050	Drawing objects	Context menu for Fib Templates still visible for pitchfork and gann fan properties.
Fixed	3051	Drawing objects	Text chart object defaults not being restored properly
Fixed	3052	Historical Data Manager	Tick sizes that have more than 4 significant figures are being condensed in the edit grid of the HDM
Fixed	3053	Charts	Changing period type via toolbar could crash NT when saved default settings for period type existed.

Fixed	3054	Charts	Chart objects drawn from indicators/strategies could have been missing/on wrong panel when default settings had been applied to chart object.
Fixed	3055	FX Pro	FXPro did not maintain the selected account in a multi-connection setup
