

## NinjaTrader Version 7.0.0.7 Beta Release 7 - January 27th, 2010

Status	Issue #	Category	Comments
Improved	3338	Market Analyzer	Optimized historical data loading to prioritize requests with the longest look back period
Improved	3381	Simulator	"Enforce immediate fills" is now effective on Currencies
Changed	3328	Instrument Manager	Local rollover offsets now only are overwritten as the contract months match in their rollover date.
Changed	3332	NinjaScript Editor	Added 1 to column and line numbers of the inline syntax checking errors to sync with the line/column numbers provided by the actual compiler.
Changed	3361	Hot Key Manager	CTRL-Z, O, A no longer are valid hotkeys. CTRL-Z, I are hard coded to zoom in/out charts.
Changed	3389	Data box\Market Analyzer	Volume display now follows condensed formatting (e.g. 0.01M instead of 10000)
Fixed	3283	General	Introduced handling to avoid 'Collection was modified and NullReferenceException' e.g. on Restore.
Fixed	3287	PFG adapter	NT now filters unknown instrument types
Fixed	3288	Charts	Exception when removing an object drawn by indicator or strategy
Fixed	3289	Charts	Placing anchors and moving objects didn't work properly when drawn into right chart margin
Fixed	3290	NinjaScript strategies	Right click->Performance Viewer chart no longer holds any indicator from the underlying strategy
Fixed	3292	Charts	Moving draw objects with more than one anchor left from first bar wasn't working as expected
Fixed	3293	Strategy Analyzer	Save default for strategy did not save FillType, OptimizationType and OptimizationMethod
Fixed	3294	Charts	Indicator on indicator where input was not pulled from default plot0 did not work as expected.
Fixed	3295	Charts	Exception when selecting ER2 on instrument lookup.
Fixed	3296	Charts	When setting Label property of data series to empty string, it does not work.
Fixed	3297	Market Analyzer	Custom label set in grid were not maintained if the .Name property was set in Initialize()
Fixed	3298	Charts	Pressing "Set Default" on the chart shape properties dialog would close the form.
Fixed	3299	Market Replay	Timestamps of recorded L2 data could be off since as session are rolled.
Fixed	3300	Market Analyzer	Changing an instrument by editing the respective cell would throw of label row management and results in exceptions on saving the workspace
Fixed	3301	Historical Data Manager	Selecting "Edit logs" node and pressing "Delete" could cause an exception.
Fixed	3302	Market Replay	Rejected orders on ATM strategies could lock up NT.
Fixed	3303	General	SQL CE DB engine deployed with NT might conflict with SQL version installed already !!! exported NS assemblies needed to be exported again !!!
Fixed	3304	IB adapter	Bogus TWS data could corrupt NT and result e.g. in spikes on a chart.
Fixed	3305	Google adapter	Added UrlEncoding to instrument names to make sure only valid URLs would be created.
Fixed	3306	Market Analyzer	Row filter did not work as expected.
Fixed	3307	NinjaScript	DrawTextFixed method could cause an exception if strategy/indicator was not running on a chart.
Fixed	3308	Instrument Manager	Instrument manager could crash when adding a stock while being connected to a provider which does not support stocks
Fixed	3309	Instrument Manager	Setting contract month to 12-99 in roll over definition could cause an exception.

Fixed	3310	Strategy Analyzer	Chart could be on wrong data series if previously there was a data series optimization running
Fixed	3311	Charts	Values of bars with merge settings MergeBackAdjusted were off when bars loaded from repository.
Fixed	3312	IB adapter	Volume on realtime for non US stocks could be off.
Fixed	3313	Charts	Request for daily bars could result in too many requests to provider when requested on a day without session definition
Fixed	3314	Strategy Analyzer	Changing symbol in SA chart while indicator applied causes crash
Fixed	3315	Charts	Opening daily chart on day with no session definition build a daily bar with wrong timestamp.
Fixed	3316	Chart indicators	OnMarketData/OnMarketDepth /OnFundamentalData did not trigger as the chart was recovered in "hidden" state.
Fixed	3317	Chart indicators	Fixed several issues on Pivots/Woodies Pivots indicators
Fixed	3318	Strategy Analyzer	"Period" column had DateTime values instead of Date.
Fixed	3319	Chart objects	Changing the 'attached to' property in chart object properties dialogs didn't change the y values off the anchor points in the dialog.
Fixed	3320	Chart objects	Double click on ruler didn't select ruler, when 2nd and 3rd anchor were at the same x/y location
Fixed	3321	Chart objects	Chart objects which were on chart 'hidden' (on bar series which is not on chart) were not saved/restored in workspace.
Fixed	3322	Market Replay	Rewinding could throw off indicators
Fixed	3323	Charts	Exception when strategy which is not on chart is drawing region, regression channel or TextFixed.
Fixed	3324	Chart objects	Drawing object related exceptions on restore, e.g. multi series bar series with lots of objects on.
Fixed	3325	General	NT could lock up as replay data is downloaded and another replay/historical data request was issued.
Fixed	3326	Chart indicators	Indicators with negative z-order could plot onto other panels than that which they are placed on.
Fixed	3327	Market Replay	L2 data was not recorded correctly as the data files rolled midnight EST.
Fixed	3329	Instrument Manager	Roll over offsets had not been calculated and persisted correctly if the future was not traded on Globex.
Fixed	3330	Instrument Manager	Sim feed start price was rounded to the nearest integer.
Fixed	3331	General	Bootstrap installer setup.exe now comes with major version 7
Fixed	3333	Charts	Reintroduced tolerance on loading bars when beginning of requested bars is 4 days before first bar.
Fixed	3334	Chart objects	Drawing regression channel on panel without bars didn't work
Fixed	3335	Charts	High/Low values for Renko bars had been off.
Fixed	3336	General	Logic which should avoid unnecessary requests to provider between historical data and pool data was broken for non intra day.
Fixed	3337	Alerts	Alert was swallowed when a workspace with a chart on instrument was restored, which was not in database.
Fixed	3339	Charts	Changing instrument on chart on typing instrument name + exchange (e.g. 'GLD ARCA') ignored the exchange.
Fixed	3340	Chart objects	Selecting an object, and using mouse wheel while outside of chart brings up exception.
Fixed	3341	NinjaScript strategy	DrawRegion(...) called from strategy didn't work properly when only called once.
Fixed	3342	Chart objects	Copy/paste of global chart objects didn't insert the object properly on different charts than one, on which the copy/paste is executed.
Fixed	3343	DTN adapter	Improve handling as user has setup incorrect user/pwd in account connections.
Fixed	3344	Executions grid	"Price" column no longer is editable, but now shows prices formatted correctly.

Fixed	3345	Chart objects	Andrew's pitchfork lines could be plotted incomplete and labels could have missed if anchors of objects were outside of visible chart.
Fixed	3346	Market Replay	Order status events did not come in right sequence.
Fixed	3347	NinjaScript strategies	Resolved some persistence issues as strategies had properties with a custom type.
Fixed	3348	Charts	Changing bar series period value while logarithmic scale is set on a panel could bring the y positioning of objects or orders (chart trader) off.
Fixed	3349	Market Replay	Fixed several problems in market replay
Fixed	3350	Historical Data Manager	Download tab could crash as there were instrument list with the same instrument on different exchanges.
Fixed	3351	Historical Data Manager	Instrument lists removed by Tools->Instrument manager had been reflected in the download tab
Fixed	3352	SuperDOM	In real slow markets, the DOM prices would not render until ask price had been seen
Fixed	3353	Data grids	Grid->Save as did not save the first column.
Fixed	3354	Chart Trader	The "hand" icon (when order is selected) was not reset as the order was filled before clicking again.
Fixed	3355	Charts	Labels of x axis on intra day charts could overlap or disappear on extreme zoom out.
Fixed	3356	NinjaScript	MaximumBarsLookBack settings did not make it to the hosted data series.
Fixed	3357	MBT adapter	Overnight position had not been reflected properly.
Fixed	3358	Session Manager	Session manager now displays the time value without the seconds fraction.
Fixed	3359	Chart objects	Moving drawing objects far into the future didn't work for multi series charts with very large time range
Fixed	3360	IQFeed	Added checks to the account connection wizard to make sure user/pwd are not empty.
Fixed	3362	Charts	Line Break charts requested with bars back could be build with too few bars on first request.
Fixed	3363	Charts	Y value e.g. of cross hair could be off on logarithmic scale after zoom in/out or scroll.
Fixed	3364	NinjaScript indicators	There had been some legacy references to "Category" which had been replaced by "GridCategory"
Fixed	3365	Market Analyzer	Market analyzer templates with column type 'TimeLastTick' weren't migrated properly on migrate from NT6.5 to NT7.
Fixed	3366	General	Consecutive backups did not work.
Fixed	3367	Chart objects	Ruler chart objects did measure the between the 1st and 3rd anchor instead of the 1st and 2nd on equidistant charts.
Fixed	3368	Charts	Charts didn't move to correct position when connecting to MR or connecting to provider (e.g. SimFeed) after MR
Fixed	3369	Charts	First session with session definition on same day as live session was missing if end of session had same timestamp as beginning of actual live session
Fixed	3370	Market Analyzer	Fixed issues related to total row
Fixed	3371	Market Replay	Market Replay on several consecutive days now loads data before actual replay day from repository when slider is moved.
Fixed	3372	Chart Trader	Sim stop order were not visualized on Market Replay.
Fixed	3373	General	Some captions did not have a form on 64bit Win7.

Fixed	3374	Market Replay	On Goto or Rewind indicators are now completely recalculated.
Fixed	3375	Charts	Applying chart template with pivots indicator (which calculates pivots from loads daily series) on chart with session different than template session could crash NT.
Fixed	3376	NinjaScript	Multi-series NinjaScript no longer allows duplicate bars series.
Fixed	3377	Charts	Reloading chart/switching period type/value on chart could build spike when it was running into next session on live charts.
Fixed	3378	Historical Data Server	Downloading historical data server could result in "Index out of range" errors.
Fixed	3379	Charts	Chart executions' labels could overlap when they were located on bar which had same timestamp as several other bars.
Fixed	3380	Workspaces	Workspaces holding single quote ' in their name could cause exceptions.
Fixed	3382	IQFeed	Realtime and historical volume values for currencies now are multiples of 100,000
Fixed	3383	Charts	Volume values greater than uint.MaxValue (4 ~billion) had been inaccurate as they internally had been stored as float -> rounding issues
Fixed	3384	Charts	Chart didn't AutoScale to objects drawn from indicator when indicator only series on chart with AutoScale = true and indicator had no plot.
Fixed	3385	Charts	Fixed several AutoScale issues
Fixed	3386	Charts	Added indicator, strategy and chart series defaults to templates category on Restore/Backup and changed test in dialog accordingly (to 'Templates')
Fixed	3387	Order entry windows	BasicEntry, FxPro, FxEntry did not maintain their properties (e.g. link color) as there had been default properties.
Fixed	3388	Backup	Hot Key settings were not restored until after a restart
Fixed	3390	Market Analyzer	Using multi-series indicators could cause an index out of bounds error
Fixed	3391	Charts	Scrolling non-equidistant charts with the keyboard arrow keys moved the chart crosshairs off the mouse cursor
Fixed	3392	Strategy Analyzer	Chart tab did not use user defined defaults for Chart Properties
Fixed	3393	Chart objects	Chart objects placed on the first bar moved to be before the first bar when switching the chart from non-equidistant to equidistant
